

# WildFish Research Conference

The WildFish Research Conference will take an interdisciplinary approach. The forum will provide an opportunity for early-career researchers to showcase their findings and for attendees to explore the scientific research driving positive changes in freshwater habitats.

## Themes

Our broad range of themes will cover:

- **Freshwater biodiversity decline:** How to stop this deterioration in a changing world
- **Monitoring of freshwater systems:** Are we monitoring the right things? What's working and what's not
- **Managing and restoring catchments** from source to sea to improve water quality
- **Environmental flow:** Managing water for people and nature
- **Linking science with policy and management:** what needs to change?

## Additional information

If your research doesn't fit directly into these themes but will help deliver the objectives, please do get in touch. We believe that these challenges will need new perspectives and an unconventional approach. We are excited to see your out of the box thinking.

# WildFish.
